EDUCATION

Ph.D. Economics (Primary field: Econometrics)

University of California San Diego.

2023

La Jolla, CA

MStat (Master of Statistics)

University of Utah, Math Department

2015

Salt Lake City, UT

BS Economics

University of Oregon

2011

Eugene, OR

PROFESSIONAL EXPERIENCE

PwC - Sr Associate, Transfer Pricing

Jul 2025-Jan 2026

- Performed transfer-pricing and benchmarking analyses for multinational clients; supported related financial and economic analysis on select engagements.
- Developed client-ready documentation and communicated analytical assumptions, benchmark selection, and financial findings to internal teams.

BNY (Bank of New York Mellon) - Vice President, Model Risk Management

Aug 2023-Mar 2025

- Validated models across multiple model families within Model Risk Management, reviewing methodology, assumptions, data inputs, implementation, performance testing, monitoring, documentation, and model limitations.
- Communicated validation findings and recommendations to model owners and stakeholders, emphasizing model reliability, limitations, documentation quality, and appropriate use.

University of Utah, Department of Internal Medicine - Senior Programmer/Analyst

Dec 2014-Jul 2016

- Performed statistical analysis on large epidemiologic and genomic datasets; co-authored eight peer-reviewed biomedical publications, including one first-author paper.
- Used logistic regression, Cox proportional hazards models, random forest, and PCA in R and SAS.

QUANTITATIVE RESEARCH & SELECTED PROJECTS

Python Point-in-Time Equity Research & Backtesting Pipeline | [Project page](#) | [GitHub](#)

2026

Independent quantitative research project

- Built a modular Python pipeline for point-in-time equity data, feature construction, rolling portfolio formation, factor-regression diagnostics, transaction-cost analysis, and final-holdout evaluation.
- Implemented and evaluated a published empirical asset-pricing methodology, documenting timing conventions, feature proxies, universe screens, exposure behavior, turnover, and implementation caveats.
- Tested XGBoost nonlinear extensions and made a public project page / GitHub repo available, including a synthetic-data demo because the underlying Sharadar data are not redistributed.

Research Assistant at UCSD Rady School of Management

Jan 2018-Jun 2018

- Implemented and backtested panel forecast models for stock-return and inflation data; worked with large financial and macroeconomic panels from CRSP and FRED.

Graduate Research in Econometrics, Time-Series Inference & Statistical Learning | UC San Diego / University of Utah

- Co-authored peer-reviewed econometrics research on high-frequency regression inference and volatility modeling, including a Journal of Econometrics paper on robust F tests for regressions with observations collected at high frequency over long spans and a Journal of Time Series Analysis paper on functional GARCH.
- Developed PAC-Bayesian forecast/decision rules for binary outcomes and budget-constrained treatment allocation; implemented R simulation studies comparing model-aggregation, utility-oriented, and generalized-random-forest-based benchmarks.

TECHNICAL SKILLS

- **Python** (pandas, NumPy, scikit-learn, XGBoost, pyarrow, matplotlib), R, SQL, MATLAB, Git/GitHub, Excel, LaTeX.
- **Methods:** econometrics, time-series analysis, forecasting, regression, statistical learning, binary classification/decision rules, model aggregation, machine learning, model validation, scenario analysis, uncertainty quantification, data quality analysis, out-of-sample evaluation.

SELECTED PUBLICATIONS & WORKING PAPERS

- Pellatt, D. F., & Sun, Y. (2023). [Asymptotic F test in regressions with observations collected at high frequency over long span](#). *Journal of Econometrics*.
- Aue, A., Horvath, L., & Pellatt, D. F. (2016). [Functional generalized autoregressive conditional heteroscedasticity](#). *Journal of Time Series Analysis*.
- Working papers on PAC-Bayesian binary forecast/decision rules and budget-constrained treatment allocation; full research list available on website.
